description

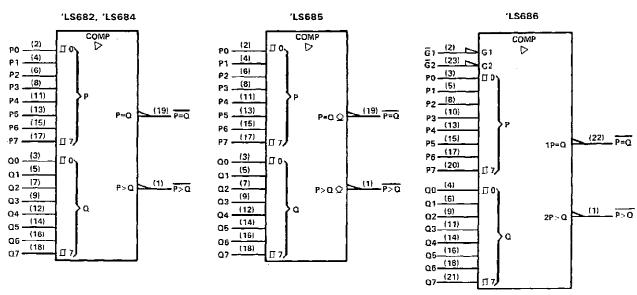

These magnitude comparators perform comparisons of two eight-bit binary or BCD words. All types provide $\overline{P}=\overline{Q}$ outputs and all except 'LS688 provide $\overline{P}>\overline{Q}$ outputs as well. The 'LS682, 'LS684, 'LS686, and 'LS688 have totem-pole outputs, while the 'LS685 and 'LS687 have open-collector outputs. The 'LS682 features 20-k Ω pullup termination resistors on the Q inputs for analog or switch data.

FUNCTION TABLE

	INPUTS		OUTI	PUTS
DATA	ENABL	.ES	P-Q	P>0
P, Q	Ğ, <u>G</u> 1	G2	, - 4	.,,
P=Q	L	Х	L	н
P>Q	X	L	н	L
P <q< td=""><td>x</td><td>×</td><td>н</td><td>Н_</td></q<>	x	×	н	Н_
P = Q	н	X	Н	Н
P>Q	×	н	н	Н
×	н	Н	Н	н

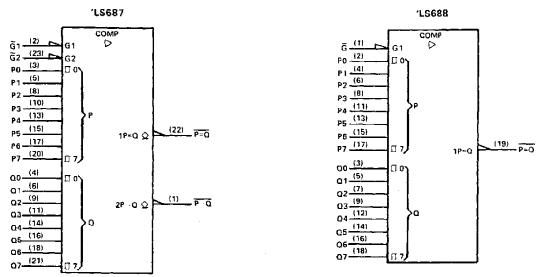

- NOTES: 1. The last three lines of the function table applies only to the devices having enable inputs, i.e., 'LS686 thru 'LS688.
 - The P<Q function can be generated by applying the P-Q and P>Q outputs to a 2-input NAND gate.
 - 3. For 'LS686 and 'LS687, \overline{G} 1 enables $\overline{P} = \overline{Q}$ and \overline{G} 2 enables $\overline{P} > \overline{Q}$.

logic symbols†

 † These symbols are in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12. Pin numbers shown are for DW, J, JT, N, and NT packages.

[†] For conditions shown as MIN or MAX, use the appropriate values specified under recommended operating conditions.

 $^{^{\}ddagger}$ All typical values are at V_{CC} \approx 5 V, T_A = 25 °C.

Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

NOTE 1: ICC is measured with any G inputs grounded, all other inputs at 4.5 V, and all outputs open.
